

Updating Expiry Dates for Clarins Products

Sensitivity: Internal

Client: Clarins

System: Speed WMS

Audience: Support / Technical Team

1. Objective

To update **expiry dates** for Clarins products in the WMS database, ensuring consistency between:

- **Stock records** (STK_DAT)
 - **Picking / mission records** (MIL_DAT)
-

2. Procedure

Step 1: Verify the Stock Record

Confirm that the LPN exists and review the current expiry date.

```
SELECT stk_dluo, *  
  
FROM stk_dat  
  
WHERE stk_nosu = 'LPN No'  
  
AND act_code = 'RSAJHBCLA';
```

✓ Proceed only if the record exists.

Step 2: Update the Stock Table (STK_DAT)

Update the expiry date to the new value provided.

```
UPDATE stk_dat  
  
SET stk_dluo = 'New Date'  
  
WHERE stk_nosu = 'LPN No'  
  
AND act_code = 'RSAJHBCLA';
```

⚠ Ensure the date format matches the system standard (e.g. YYYY-MM-DD).

Step 3: Check the Picking Table (MIL_DAT)

Determine whether the LPN is involved in any **open missions**.

```
SELECT mil_dluop, *  
FROM mil_dat  
WHERE mil_nosu = 'LPN No'  
AND act_code = 'RSAJHBCLA'  
AND mil_stat < '040';
```

Step 4: Update the Picking Table (If Required)

If Step 3 returns records, update the expiry date in the picking table.

```
UPDATE mil_dat  
SET mil_dluop = 'New Date'  
WHERE mil_nosu = 'LPN No'  
AND act_code = 'RSAJHBCLA'  
AND mil_stat < '040';
```

3. Important Notes

- **Always update STK_DAT first**, then MIL_DAT if applicable
 - If no records are found in MIL_DAT, **no update is required**
 - Keep an **audit record** of:
 - LPN
 - Old expiry date
 - New expiry date
 - Perform updates in **Test / QA** before Production (where applicable)
-

4. Example

LPN: CLS000000000199735

New Expiry Date: 2027-03-26

```
-- Update Stock

UPDATE stk_dat

SET stk_dluo = '2027-03-26'

WHERE stk_nosu = 'CLS000000000199735'

AND act_code = 'RSAJHBCLA';

-- Update Picking (only if open missions exist)

UPDATE mil_dat

SET mil_dluop = '2027-03-26'

WHERE mil_nosu = 'CLS000000000199735'

AND act_code = 'RSAJHBCLA'

AND mil_stat < '040';
```

Expected Outcome

- Stock and picking records reflect the **same correct expiry date**
- No inconsistencies during picking, validation, or outbound processes
